# Embedding Facebook Live Stream on web page using ParishPlace Live and Pre-Recorded Video

Important Note: These instructions assume you have created an Additional Page with the HTML name **livestream.** If you need assistance creating this page, contact Kathy Papalia at kpapalia@eriercd.org or email rpapalia@eriercd.org to reach Rich Papalia.

Instructions also assume you are editing the web page and someone else is filming the livestream on location.

1. Open Browser you normally use to edit your ParishPlace website and log into your parish website.

2. Click **Additional Page.**

3. Click the **Edit** link for the **Livestream** page.

4. At the top of the page, type a new heading for this week's live feed.
   Example: **March 22, 2020 11am Sunday Mass with Fr. John Doe**

5. Press **Enter** twice to move the other pre-recorded videos down the page.

6. Type the words **LIVE FEED HERE.**

7. Press **Enter** twice again. This should push last week's video down the page.

8. Click the **<>** source code button on the ribbon. The "Source Code" window should appear on the screen.   Sometimes you have to scroll down a little to see the window.
   Leave the code window open.

9. Open another tab in the same browser or open a different browser.

10. Open your Facebook page.

11. Copy the iframe code from Facebook into your web page.

    - **If you are also running the livestream,** copy the code before you start the stream.

    - **If someone else is running the livestream**

      i. Open your Facebook page.

      ii. As soon as the video goes live, click the video feed.

      iii. Click the ellipse button (three dots) in the upper right of the video.

      iv. Choose **Embed.**

      v. Copy the entire iframe code by clicking the button.

12. Go back to the web page backend. The code window should still be open. If you closed it, press the [<>] button.

13. **At the top of the code view [<>},** click and drag to select the text LIVE FEED HERE and click the **Ctrl + V** keys on your keyboard to paste in the iframe code.

14. Click **OK**.

15. Click **Publish**.

Going Live with Facebook – Simple Instructions

These instructions assume you are using a very simple setup – a smartphone/tablet OR a camera connected to a laptop and not a dedicated encoder.

1. Create a new post.

2. Click the **Live Video** button.   It may be hidden under the ellipse button […].

3. If you also want to embed the video on your website and if you are using a computer and not a smartphone or tablet,

    a. Click the downward pointing arrow next to **Stream** which is under the **Settings** heading.

    b. Check mark "Allow Embedding".

    c. Depending on who is embedding the code. Instructions for embedding can be found on page 1 of this document.

        i. If **YOU** are embedding the video on an html page, you can copy the iframe code now and paste it into your website.

        ii. If **SOMEONE ELSE** is embedding the video for you, they can grab the iframe code from their Facebook account once the video starts.

4. If you want the livestream to be public, click the **Friends** button under the **Post** heading and choose **Public**.

5. Choose your livestream method:

    a. Click **Go Live Now** to start your feed now.

    b. **Schedule a Live Video** and pick a date and time.
