# Embedding Facebook Live Stream on web page using ParishPlace
## Live Feed Only – No Archived Pre-Recorded Video

**Important Note:** These instructions assume you have created an Additional Page with the HTML name **livestream.** If you need assistance creating this page, contact Kathy Papalia at kpapalia@eriercd.org or email rpapalia@eriercd.org to reach Rich Papalia.

You should promote the http://www. *YourDomainNameHere* /livestream.html page in the text of your home page or with a custom banner.

1. Open the browser you normally use to edit your ParishPlace website and log into your parish website.

2. Click **Additional Page**

3. Click the **Edit** link for the **Livestream** page.

4. Click the **<>** source code button on the ribbon. The "Source Code" window should appear on the screen. Sometimes you have to scroll down a little to see the window.

5. Select everything and click the **Delete** key on your keyboard.

6. Type a heading for this mass and leave this window open.
   Example: **March 22, 2020 11am Sunday Mass with Fr. John Doe <br/><br/>**

7. Open another tab in the same browser or open a different browser

8. Copy the iframe code from Facebook into your web page.

   • **If you are also running the livestream,** copy the code before you start the stream.

   • **If someone else is running the livestream**

      i. Open your Facebook page.

      ii. As soon as the video goes live, click the video feed.

      iii. Click the **ellipse** button (three dots) in the upper right of the video.

      iv. Choose **embed**.

      v. Copy the entire iframe code by clicking the button.
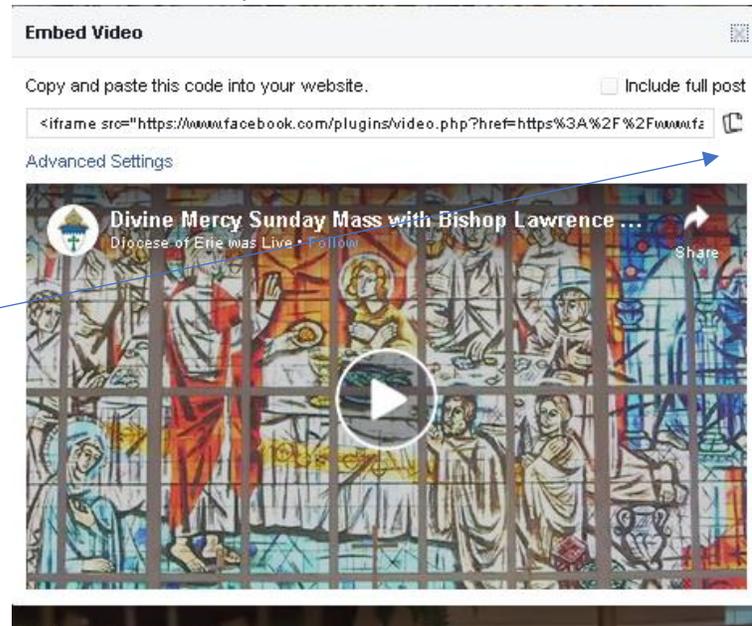

9. Go back to the web page backend. The code window should still be open. If you closed it, press the [<>] button.

10. Put your cursor after the <br/><br/> code and click together the **Ctrl + V** keys on your keyboard to paste in the iframe code.

11. Click **OK**.

12. Click **Publish.**

# Going Live with Facebook – Simple Instructions

These instructions assume you are using a very simple setup – a smartphone/tablet OR a camera connected to a laptop and not a dedicated encoder.

1. Create a new post.
2. Click the **Live Video** button.  It may be hidden under the ellipse button […].
3. If you also want to embed the video on your website and if you are using a computer and not a smartphone or tablet,
   a. Click the downward pointing arrow next to **Stream** which is under the **Settings** heading.
   b. Check mark "Allow Embedding".
   c. Depending on who is embedding the code.  Instructions for embedding can be found on page 1 of this document.
      i. If **YOU** are embedding the video on an html page, you can copy the iframe code now and paste it into your website.
      ii. If **SOMEONE ELSE** is embedding the video for you, they can grab the iframe code from their Facebook account once the video starts.
4. If you want the livestream to be public, click the **Friends** button under the **Post** heading and choose **Public**.
5. Choose your livestream method:
   a. Click **Go Live Now** to start your feed now.
   b. **Schedule a Live Video** and pick a date and time.
